BAV Mitteilungen No. 233

November 2013

Abstract: *This 77th compilation contains especially the results of visual observations of BAV-members mostly from the years 2012 and 2013. Here we publish altogether 189 minima and maxima of 104 eclipsing binaries and pulsating stars, 29 of them have been observed using CCD-Technique. The data were acquired by 9 observers.*

We introduce 3 minima timings from 3 eclipsing binaries, 2 maxima from 1 RR-Lyrae-Star, 114 maxima and minima from 70 mirastars, 63 maxima and minima from 25 semiregular, longperiod and RV-Tauri-stars and 7 maxima and minima from 5 cataclysmic variables.

The results were acquired by 9 observers in Germany and one in Austria mostly in the years 2012 and 2013. All moments of minima and maxima are heliocentric UTC.

This paper contains only unpublished observations. All the lightcurves with evaluations can be obtained from the office of the BAV for inspection.

Please use the following link for an easy access to all the publications of the BAV including the "Lichtenknecker Database of the BAV": <http://www.bav-astro.de/sfs>.
